Version 2

Do you want to help us learn what happens to the brain after a concussion? Consider participating in a research study about measuring and analyzing brain activity in youth.

What is this study about:

- We are conducting a research study looking at brain activity in youth during recovery from a concussion.
- We will compare brain activity measured from youth with and without concussion.
- We are using a technology called Near Infrared Spectroscopy (NIRS) to measure brain activity.
- There are no known harms associated with NIRS.

Who can participate?

We are looking to recruit 20 youth with the following profile:

- Between the ages of 13-18 years;
- **Have sustained a concussion within the last two weeks**
- Do not currently have a skull fracture;
- Have no degenerative, cardiovascular, metabolic, or respiratory disorders;
- Have no drug or alcohol-related conditions;
- Have no prior history of a psychiatric disease or mental health conditions;
- Are not currently using any drugs that alter or have an impact on brain state;
- Can read and understand English.

What's involved?

- During each session, a headband with small sensors attached to it will be placed on your head. This will allow us to measure how brain activity changes when you perform different tasks.
- We will also place a small accelerometer sensor on your head to measure movement, and a sensor on your finger to measure your heart rate.
- **You will come in for 3 sessions. The first session will be within 2 weeks of injury, 1 and 3 months after injury.**
- **Each session will be approximately 1 hour in length.**
- During each session, you will perform 3 tasks - colour-based attentional task, a balance task, and both attention and balance tasks at the same time.
- All sessions will be held at Holland Bloorview and conducted at convenient times for you.

What are the benefits of participating?

- By taking part in this research study you are helping to better understand the effect and recovery of concussions
- Help drive understanding of concussions to help guide rehab programs
- **Contacting us does not obligate you to participate in the study.**
- You will receive gift card per session as a token of appreciation for your participation.
