HAVE YOU HAD A BRAIN INJURY OR CONCUSSION?

What is this study about?

We want to know more about vision in youth who have had an acquired brain injury or concussion. We want to learn if a short computer test is a good way to check for vision changes after a brain injury.

Who can participate?

We are looking for youth:

- Ages 9-18 years old
- Who have been diagnosed with acquired brain injury or concussion
- Who are inpatients or outpatients at Holland Bloorview.
- Who can show that they understand what the study is about before they participate

What's involved?

This research will involve one visit with researchers at Holland Bloorview Kids Rehabilitation Hospital. Participants will complete a 10-minute vision test on a computer. Participants will receive a \$5 gift card.

What are the benefits of participating?

This research may help us find better ways to care for youth after a brain injury.
