

Adults with autism see, hear and feel the world in a unique way

We don't want to change this. But sometimes, certain situations may be challenging. That's why we're conducting V1ADUCT – a clinical trial testing an investigational drug to find out if we can help adults with autism spectrum disorder manage certain social and communication challenges a little better.

Please turn overleaf for more information.

V1ADUCT

Do you have autism spectrum disorder?

Are you at least 18 years old?

Do you have someone you see and speak to regularly, who would be willing and able to be your 'study partner'?

If so, you may be able to take part in a new clinical trial called V1ADUCT.

Why take part?

Sometimes, people with autism spectrum disorder (ASD) find some situations challenging. So we're developing an investigational drug to see if it can make these situations a little easier to manage. And to learn if it works, we need adults with ASD (who meet the criteria above) to take part.

What does taking part involve?

The total length of the V1ADUCT trial is 40 weeks, including screening (to assess your eligibility) and follow-up. The dosing period of this trial will last for 24 weeks, during which half of the participants will be given the investigational drug and half will be given a placebo (a lookalike tablet that contains no active medicine). Neither you, nor your study doctor, will know which group you have been assigned to. But please be assured that every participant will receive the same close study-related monitoring throughout via regular study visits, regardless of their group. Participants may also be able to take part in a 2-year extension trial during which all participants will receive the investigational drug.

What else should I know?

All study-related drugs and assessments will be provided at no cost to participants. Travel reimbursement or support may also be included, depending on local country regulations. Of course, taking part in a clinical trial is a personal decision and no one has to join if they don't want to. It's also important to know that if participants join the trial and then change their mind, they can leave at any time without any impact on their usual healthcare.

Learn more

Of course, a clinical trial isn't right for everyone, and there is no obligation to take part. But if you think you may be interested in taking part, or would like more information, please contact the V1ADUCT study team for a chat.
