

# Does your child have healthy hips?

Children and youth with cerebral palsy (CP) are at higher risk of having their hip slide or come out of joint.

# Early detection is important to maintain healthy hips

Does your child have hip pain?

Has there been a decline in the way your child functions (seating, standing or mobility)?

Are you finding it more difficult to provide care, such as dressing your child or putting on a diaper?

Share this card with your health care provider and start a conversation about your child's hip care.

For more information about CP hip care and access to our hip surveillance pathway visit our website at:
