

**Does your child have a diagnosis of Autism Spectrum Disorder (ASD, Autism, Asperger's, PDD-NOS)?**

*Is your child taking any of these medications?*

Abilify (Aripiprazole), Risperdal (Risperidone), Seroquel (Quetiapine), Zyprexa (Olanzapine), Saphris (Asenapine Maleate), Clozaril (Clozapine), Fanapt (Iloperidone), Latuda (Lurasidone), Zeldox (Ziprasidone), Invega (Paliperidone)

*These medications are commonly used to improve irritability, agitation, and repetitive behaviours.*

**Is your child between 6-17 years of age?**

Has your child gained weight after using any of these medications?

We are currently conducting a clinical trial to investigate whether **Riomet®(metformin)** can decrease weight gain caused by these medications.
