Are you a clinician or clinical trainee within the field of pediatric rehabilitation who is currently working or doing a placement at Holland Bloorview?

Consider participating in a survey on knowledge and attitudes of clinicians and trainees regarding gender sensitive care.

### What is this study about?

We want to understand the knowledge and attitudes of pediatric rehabilitation clinicians and trainees in providing gender-sensitive care.

### Who can participate?

We are looking for:

- Pediatric rehabilitation clinician OR clinician trainee (e.g., physician, pediatrician, nurse, social worker occupational therapist, physiotherapist, speech therapist, etc.) who has experience in pediatric rehabilitation or is doing a placement at Holland Bloorview.

### What's involved?

Participants will be asked to take part in:

- 1 survey (approx. 30 mins) via *REDCap* or hard copy

### What are the benefits of participating?

There are no direct benefits of participating; however, your participation will improve our understanding of how best to support clinicians in providing gender-sensitive care in pediatric rehabilitation that in turn might help to address gender-based health inequities.

Participants will be entered into a draw for a chance to receive a \$50 gift card.
