Results

Four Categories

Past Disclosure Experiences
Prototype information & activities (feedback & suggestions)
Prototype design & structure (feedback & suggestions)
Overall Usability (ease of use, satisfaction, usefulness)

Prototype Revisions

I haven’t seen many similar resources for older youth and young adults about disclosure…I think it’s approachable and gives a good starting point.

Most revisions focused on improving ease of use.

E.g., dividing the tool into three parts, representing information via videos and graphics

Other revisions included adding new content and quotes and housing the tool on a Holland Bloorview webpage.

Conclusions & Next Steps

We developed a tool that was perceived positively and may support disclosure decision-making.

The revised tool should be evaluated to assess impact and feasibility.

Relevance to Holland Bloorview Clients

This tool may help autistic clients make autonomous, confident disclosure decisions at work.

Acknowledgements

We thank the study participants for their contributions and the four autistic youth project advisors (e.g., Cameron Lau who is co-presenting) for their invaluable partnership.
