The very nature of ethnographic research offers an array of opportunities for researchers to understand the social world around them. The book identifies the multifaceted use of ethnographic methods in the rehabilitation setting. It touches on how acute and chronic conditions can affect the nature of ethnographic work in attempts to offer originality in a range of rehabilitation settings. Readers will find this collection of examples useful for informing their own research, and it aims to enlighten new discussion and arguments regarding both methodological and empirical use of ethnographic work internationally.</p> <p>Hayre, Christopher M., editor.; Muller, Dave J., editor.; Hackett, Paul M. 	<p><b>Tomorrow will be different : love, loss, and the fight for trans equality</b></p> <p><b>Summary</b> Before speaking at a national political convention about her experiences as a transgender person, the author struggled with the decision to come out - not just to her family but to the students at her university, where she was serving as student body president. She'd known she was a girl from her earliest memories, but it wasn't until a Facebook post announcing her truth went viral that she realized the impact her story could have on the country. Four years later, the author was one of the nation's most prominent transgender activists, walking the halls of the White House, advocating inclusive legislation, and addressing the country in the midst of a heated presidential election. She had also found her first love and future husband, a trans man and fellow activist, who complemented her in every way ... until cancer tragically intervened. This book is the author's story of love and loss and an account of the LGBTQ community's battle for equal rights.</p> <p>McBride, Sarah, 1990- author. 	<p><b>The explosive child : a new approach for understanding and parenting easily frustrated, chronically inflexible children</b></p> <p><b>Summary</b> Dr. Ross Greene, a distinguished clinician and pioneer in the treatment of kids with social, emotional, and behavioral challenges, has worked with thousands of explosive children, and he has good news: these kids aren't attention-seeking, manipulative, or unmotivated, and their parents aren't passive, permissive pushovers. Rather, explosive kids are lacking some crucial skills in the domains of flexibility/adaptability, frustration tolerance, and problem solving, and they require a different approach to parenting. Throughout this compassionate, insightful, and practical book, Dr. Greene provides a new conceptual framework for understanding their difficulties, based on research in the neurosciences. He explains why traditional parenting and treatment often don't work with these children, and he describes what to do instead. Instead of relying on rewarding and punishing, Dr. Greene's Collaborative Problem Solving model promotes working with explosive children to solve the problems that precipitate explosive episodes, and teaching these kids the skills they lack.</p> <p>Greene, Ross W., author.
