

# PARTICIPATE IN Research

**Help us design a new brain-controlled device for kids with disabilities!**

We are looking for **neurotypical adults and children (8+)** to help us develop a new device that could allow children with motor impairments to communicate and control things in their environment using their brainwaves.

## What's involved?

- **Two 90-min** sessions at Holland Bloorview (flexible scheduling).
- Wear an EEG headset.
- Use your brainwaves, eyes, and facial expressions to play a computer game.

*A token of appreciation will be provided for your time!*

## Potential risks?

- There are no known risks associated with the EEG device used in this study.
- You may experience some discomfort, fatigue or frustration during study tasks.

## Potential benefits?

- Your participation will help us develop a new device for kids with disabilities.
