

PARTICIPATE IN Research

Help us design a new brain-controlled device!

EXPRESS-BCI Study: We are looking for **children with quadriplegic cerebral palsy (8+ years old)** to try out a new device where you control things using the signals from your brains, eyes, and face muscles.

What's involved?

- **Two 1.5–2 hour sessions** at Holland Bloorview (flexible scheduling), and
- **Two 30 min interviews** where you tell us what you thought of the device.
- You will wear an EEG headset & sensors around your eyes and face.

Potential risks?

- There are no known risks associated with the devices used in this study.
- You may experience some discomfort, fatigue or frustration during study tasks.

Potential benefits?

- Your participation will help us develop a new device for kids with disabilities.

A token of appreciation will be provided for your time!
