We invite you to join a research study to help develop a guideline for reporting the use of co-design to develop health interventions.

What is this study about?

Researchers at Holland Bloorview are developing a guideline called the Preferred Components for Co-design in Research (PRECISE) to help improve reporting in research studies that use co-design to develop health interventions. This research study aims to prioritize the co-design components, values/principles, associated methods and outcomes to be included in the PRECISE reporting guideline.

Who can participate?

We are seeking a panel of **researchers, designers, journal editors, healthcare administrators, and patient/caregiver partners** who:

1. Have expertise in co-design (≥5 years of experience participating in, leading, designing, developing, implementing, evaluating, or overseeing the reporting of co-design studies).
2. Are at least 18 years old.
3. Have access to a device and internet connection capable of supporting online survey completion.
4. Are fluent in English .

What's involved in the study?

The study involves **2-3 online surveys** to gather your opinion on reporting items for the PRECISE guideline. The surveys are expected to take 30-45 minutes. Each survey will be open for 2 weeks, and there will be a 2-week break between each round. **Total time commitment is 1.5-2 hours over the course of 2 months.** All study activities are completed virtually from your home or workplace at your own pace.

Are there any potential benefits?

There are no direct individual benefits from participating in this study. The input you share through participation will help contribute to the development of a relevant and useful PRECISE reporting guideline.

Are there any potential risks?

Thinking about past negative healthcare experiences may trigger some emotional or psychological distress due to the nature of the questions. You can skip questions, take a break, or stop answering at any time.

Participants will receive a gift card to thank them for their time.
